GLÜEON

COMMON
DATABASE
MODEL

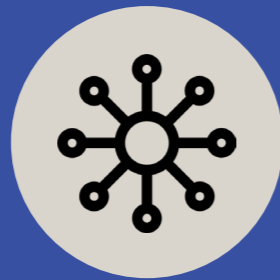

GLŪEON (UDB)

GLŪEON is a Common Database Model that has been reimagined.

GLŪEON CONNECTORS

For the most popular ERP- synchronises data incrementally into a single near “live” database, 24 hours a day.

GLŪEON UNIFIERS

Utilities that enable data common to multiple ERP, CRM and HR sources to be homogenised into a single RDBMS.

GLŪEON ACCELERATORS

Utilities for developers - for ultra easy rapid BI and dashboard development.

GLŪEON is a Common Database Model that’s been reimagined.

49K

MERGERS & ACQUISITIONS

The number of mergers and acquisitions that took place globally in 2018.

874K

EXPENSIVE MOVE

The average cost of integrating data in a merger or acquisition.

200+

ENTERPRISE RESOURCE PLATFORMS

The number of ERPs available on the market today, 50+ of which are used by large scale organisations.

1K+

DATA MIGRATION COMPANIES

The number of companies offering data migration services.

CORPORATE DATA INTEGRATION & BI DEVELOPMENT

The fastest way to grow a business with global aspirations and value add targets is to acquire companies. Imagine you are Chairman of a global company that wants to make acquisitions; you buy a new company because the synergies make sense – both in the direction of sales, as well as operational cost savings. That is, as long as you can integrate your new acquisition's systems rapidly.

With GLÜEON, you truly can- and at a fraction of the cost of the traditional approaches.

There are over 200 ERP and accounting systems in the world all with different database structures. This is a nuisance if you have a complex business with several different ERP systems. Writing a consolidated sales report, for example, requires queries on each ERP's customer and invoice tables etc.

GLÜEON seeks to change this by providing common datanase model for the most popular mid-to-large business ERPS (Enterprise Resource Planning Systems). Most data warehouses are a few hours to a day out of date. GLÜEON streams data from the ERP incrementally, 24x7, and is only ever a few minutes behind the originating transactions and data.

Rapidly,
Now,
Economically.

DISRUPTION CAN BE GOOD BUT NOT WHEN IT IS OPERATIONAL DISRUPTION

Panorama Consulting's research has found that SAP has the longest operational disruptions.

SAP works with large organisations that have complex, global operations. An operational disruption at a large organisation can affect multiple locations, which can take more time and effort to resolve.

Infor has the shortest operational disruptions. Since Infor encourages the use of out-of-the-box functionality, its clients are assuming less risk. Customisation can have unforeseen effects on software functionality due to interdependencies.

What's most important to you?

Business Intelligence - that has all the data from, and including the most recent additions to, your global business. The capability to centralise functions so that your existing talent can operate and administer new acquisitions the minute the data starts to stream into the best of breed app they know, meaning you start to deliver cost saving synergies in not months, not weeks – but days! Rapidly, now, economically.

When you are ready to standardise, you have unified data, cleansed, and ready to migrate from a single source into your chosen ERP.

THE SOLUTION TO YOUR NEED FOR A SINGLE VIEW OF YOUR BUSINESS'S WORLD

There are over 200 ERP and accounting systems in the world all with different database structures. This is a nuisance if you have a complex business with several different ERP systems. Writing a consolidated sales report, for example, requires queries on each ERP's customer and invoice tables etc.

GLÜEON seeks to change this by providing a common data model for the most popular mid-to-large business ERPS (Enterprise Resource Planning Systems). Most data warehouses are a few hours to a day out of date. GLÜEON streams data from the ERP incrementally, 24x7, and is only ever a few minutes behind the originating transactions and data.

Acquisitive companies can use best of breed applications to enable them to achieve maximum efficiency e.g. for centralising credit & collections management, procurement and accounts payable, business intelligence and reporting, CRM, and HR.

The speed with which data from the new ERP can be integrated with global data is 90% faster and less expensive than migrating to a centralised ERP at the same time as enabling cost saving synergies to accrue sooner.
